

A production line with several machines needs to change the set-up for a new order. It takes 2 x Engineers 45min setup time. If the same production line fitted the new Siko AG05 it would take 1 x Engineer less than 5mins set-up time.

Which is the most cost effective?

(5 Marks)

Fisherwerke has already switched parts of its packaging production over to the Siko AG05 actuators. By using approximately 50 actuators of the AG05 series, Fischer was able to reduce the set-up times of several production lines from 45 minutes to under 5 minutes. In addition to the low weight and small installation size, the customer was particularly impressed by the connectivity and long-term reliability of the solution and the flexibility gained in the production process. Incoming orders can be dealt with quickly without having to stock the full range of items.
