

Total solution to all position measurement and control

Food Manufacturing 2

Providing solutions to application ideas

This independent company **makes a range of machinery to produce bakery products**, these include bar formers, extruders, complete automated food lines, confectionary cookers and industrial ovens, sandwich machines, rotary moulders and rotary cutters. The company has over 100 years manufacturing experience and exports worldwide.

They were at the time using a competitor's shaft mounted **mechanical position indicator which has a plastic housing**. At one of the client's customer's sites the plastic housing of **the indicator was damaged and ended up in the food product**. The result of this caused a change to the specification of the machine where it became necessary where possible to use indicators which have housings stronger than plastic to prevent further food contamination.

We were already a supplier to this customer so they were aware we manufacture a wide range of digital mechanical shaft mounted position indicators. They therefore called us in to discuss the options.

The **DA05/1 was chosen as it has an extremely robust cast alloy metal housing** which could also be supplied in the black paint finish requested by our client.

For many years now this company has replaced all the plastic versions with the metal housed equivalent giving a 100% success record.
