

Cranes, aerial lifts & construction machines

Everything's upright

Siko have been designing and manufacturing sensors that counteracts tipping of heavyweights such as cranes, aerial lifts construction machinery with wire-actuated encoders and heavy-duty rotary encoders and also ensures precise measurements in rough environments.

Level, Angle & Position Monitoring

- **Wire-actuated encoders** for linear path measurement with robust wire-actuation technology
- **Robust rotary encoders** for angle, path and speed measurement
- **Inclinometers** are suitable for non-contacting measurement of absolute angle positions
